Column E Explanations

1. Registration Number: 84-R-0072

2. Number of animals used in this study:

A total of 12 dogs were used on this study. However 1 dog developed adverse clinical signs following test article treatment and is reported here as a Category E animal. The remaining dogs on the study were Category C.

3. Species of animals used in this study: Canine

4. Purpose of Study:

This was a routine toxicokinetic study to determine the maximum tolerated dose following oral gavage administration of the test article.

5. Scientific or regulatory justification for withholding of pain/distress relief:

In one dog, unexpected adverse effects, vomiting and seizure activity were observed immediately following test article administration and the veterinarian was called immediately. The dog was treated by the veterinary technician with intravenous diazepam to control the seizures. It developed labored breathing, became cyanotic and before the veterinarian arrived to evaluate and euthanize the dog it had died.
