Type: ROUTINE INSPECTION

Date: Apr-21-2009

WOODBURY, MN 55125

---

**2.32** (c) (1) (ii)

### PERSONNEL QUALIFICATIONS.

Proper handling and care for the various species of animals used by the facility.

On 17 March 2009 a dog escaped its' handler out of doors and was hit by a car. The handler used only one leash on the animal and was trying to collect a urine sample from the dog at the time of the incident. The incident resulted in the dogs death.

The facility failed to protect the welfare of the animal by not ensuring all personnel were adequately trained in handling procedures.

Correction: The facility has implemented a corrective action for the handling of animals by formulating a written policy on animal handling and that all animal handlers must sign a notice of agreement to follow all of the facilities policies.

This affected one animal.

WOODBURY, MN 55125

### 3.53 (c) (2)

#### PRIMARY ENCLOSURES.

Each rabbit housed in a primary enclosure shall be provided a minimum amount of floor space, exclusive of the space taken up by food and water receptacles, in accordance with the following table:

#### Individual rabbits (weaned)

Individual weights		Minimum floor space		Minimum interior height	
kg	lbs	m <sup>2</sup>	ft <sup>2</sup>	cm	in
<2	<4.4	0.14	1.5	35.56	14
2-4	4.4-8.8	0.28	3.0	35.56	14
4-5.4	8.8-11.9	0.37	4.0	35.56	14
>5.4	>11.9	0.46	5.0	35.56	14

The one rabbit (spotted gray and white, approximately 1.5 lbs) viewed on inspection was housed in a primary enclosure that measured only 12 inches in height.

Rabbits need primary enclosures at least 14 inches in height. This allows for normal postural movements and behavior ensuring the husbandry of the animal and its health and wellbeing.

Provide a primary enclosure for the rabbit housed at the facility that is at least 14 inches in height and has at least 1.5 square feet of space.

Correct by: 21 July 2008. This affects 1 animal indirectly.

Note: Facility will provide exercise of the rabbit until new caging is acquired.

Inspection and exit interview conducted with Resident Veterinarian.

End of report.

**2.31** (d) (1) (ii)

### **INSTITUTIONAL ANIMAL CARE AND USE COMMITTEE (IACUC).**

The principal investigator has considered alternatives to procedures that may cause more than momentary or slight pain or distress to the animals, and has provided a written narrative description of the methods and sources, e. g., the Animal Welfare Information Center, used to determine that alternatives were not available.

The protocols for canine and feline surgery did not contain a written narrative describing the methods and sources used to determine that alternatives to painful and distressful procedures were available.

The principle investigator must provide in the protocol a written narrative describing the methods and sources used to determine that alternatives to painful procedures, such as canine and feline surgery, was conducted to assure that animals are used appropriately and to ensure their health and wellbeing.

Provide a written narrative describing the methods and sources used to determine that alternatives to painful and distressful procedures were or were not available for IACUC review.

Correct from this time forward.

Inspection and exit interview conducted with Veterinary Technology Program Coordinator.

End of report.

**2.31** (c) (3) **REPEAT**

### **INSTITUTIONAL ANIMAL CARE AND USE COMMITTEE (IACUC).**

IACUC Functions. With respect to activities involving animals, the IACUC, as an agent of the research facility. Prepare reports of its evaluations conducted as required by paragraphs (c)(1) and (2) of this section, and submit the reports to the Institutional Official of the research facility.

The IACUC did not submit a report to the Institutional Official since the last inspection.

## Inspection Report

---

The IACUC needs to send a report to the Institutional Official concerning animals used at the facility and animal facilities to ensure that the Institutional Official has oversight of all activity concerning animals at the facility.

Ensure that the Institutional Official receives reports from the IACUC Committee at least once every 6 months.

### 3.6 (b) (4)

#### PRIMARY ENCLOSURES.

Resting surfaces. Each primary enclosure housing cats must contain a resting surface or surfaces that, in the aggregate, are large enough to hold all the occupants of the primary enclosure at the same time comfortably. The resting surfaces must be elevated, impervious to moisture, and be able to be easily cleaned and sanitized, or easily replaced when soiled or worn. Low resting surfaces that do not allow the space under them to be comfortably occupied by the animal will be counted as part of the floor space.

The primary enclosures housing 3 cats individually at the facility did not have elevated resting surfaces. This did not allow the animals an elevated surface to rest on. The enclosures had an elevated grate system that comprised the entire floor space of the enclosure.

Primary enclosures must have elevated surfaces to allow for the cats' comfort and to ensure their health and well-being.

Provide elevated resting surfaces for the cat primary enclosures.

Correct by: 31 March 2009. This affected 3 animals indirectly.

Inspection and exit interview conducted with Veterinary Technology Coordinator.

End of report.
