### 3.3 (e) (1)

#### SHELTERED HOUSING FACILITIES.

(e) Surfaces. (1) The following areas in sheltered housing facilities must be impervious to moisture:

- (i) Indoor floor areas in contact with the animals;
- (ii) Outdoor floor areas in contact with the animals, when the floor areas are not exposed to the direct sun, or are made of a hard material such as wire, wood, metal, or concrete; and
- (iii) All walls, boxes, houses, dens, and other surfaces in contact with the animals.

In the indoor portion of the cat rooms, there are benches at the feeding stations that are made with wood. This wood has not been sealed and is not impervious to moisture. Porous surfaces such as wood can not be effectively cleaned and sanitized and can contribute to odors and the spread of disease. These surfaces must be treated or replaced with material that is impervious to moisture. To be corrected by March 1, 2009.

This inspection was conducted at the new location by Dr. Jami Niemann, VMO and facility staff.

This is a transcribed copy of the original inspection report.
