2.33 (b) (2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE.

"(b) Each research facility shall establish and maintain programs of adequate veterinary care that include:

....

(2) The use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries, and the availability of emergency, weekend, and holiday care;"

At least four different medications that were in the surgery area medication cabinet were beyond the expiration date.

All expired medications were discarded at the time of inspection.

3.54 (a)

FEEDING.

"3.54 Feeding.

(a) Rabbits shall be fed at least once each day except as otherwise might be required to provide adequate veterinary care. The food shall be free from contamination, wholesome, palatable and of sufficient quantity and nutritive value to meet the normal daily requirements for the condition and size of the rabbit."

The mill date written on top of a feed container in the rabbit room was 2/27/08. Feed should be used within six months of the mill date to ensure freshness and quality. The May 2008 IACUC semi-annual inspection also cites the need for proper labeling of feed containers with mill dates to ensure quality.

Corrected at the time of inspection.

2.32 (a)

PERSONNEL QUALIFICATIONS.

"(a) It shall be the responsibility of the research facility to ensure that all scientists, research technicians, animal technicians, and other personnel involved in animal care, treatment, and use are qualified to perform their duties. This responsibility shall be fulfilled in part through the provision of training and instruction to those personnel."

A co-investigator administered a compound not approved by the IACUC to two animals, resulting in their deaths. All components of any research involving animals must be reviewed and approved by the IACUC prior to any animal use taking place.

Prior to the time of this inspection, the Institution and the IACUC implemented comprehensive measures to retrain the individuals involved and to ensure that such an error does not recur.

3.75 (e)

HOUSING FACILITIES, GENERAL.

"(e) Storage. Supplies of food and bedding must be stored in a manner that protects the supplies from spoilage, contamination, and vermin infestation. The supplies must be stored off the floor and away from the walls, to allow cleaning underneath and around the supplies. Food requiring refrigeration must be stored accordingly, and all food must be stored in a manner that prevents contamination and deterioration of its nutritive value. Only the food and bedding currently being used may be kept in animal areas, and when not in actual use, open food and bedding supplies must be kept in leakproof containers with tightly fitting lids to prevent spoilage and contamination. Substances that are toxic to the nonhuman primates but that are required for normal husbandry practices must not be stored in food storage and preparation areas, but may be stored in cabinets in the animal areas."

Pallets of chow in ASA and the sheltered housing areas were placed up against the wall. A container of granola in an ASA animal housing food storage area was past its expiration date.

Proper storage and rotation of food supplies is necessary to ensure its wholesome quality.

All identified problems were corrected at the time of inspection.

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE.

"(b) Each research facility shall establish and maintain programs of adequate veterinary care that include:

(2) The use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries, and the availability of emergency, weekend, and holiday care;"

A baboon, 26249, had surgery as part of a research protocol. On necropsy as part of that protocol, a previously identified abdominal mass turned out to be a surgical sponge. The animal had been monitored due to the mass and weight loss, but had no other symptoms noted.

Prior to the time of this inspection, the IACUC reviewed the protocol and made recommendations to the investigators and veterinary staff to minimize the chances of recurrence.

2.33 (b)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE.

" (3) Daily observation of all animals to assess their health and well-being; Provided, however, That daily observation of animals may be accomplished by someone other than the attending veterinarian; and Provided, further, That a mechanism of direct and frequent communication is required so that timely and accurate information on problems of animal health, behavior, and well-being is conveyed to the attending veterinarian;

(4) Guidance to principal investigators and other personnel involved in the care and use of animals regarding handling, immobilization, anesthesia, analgesia, tranquilization, and euthanasia; and

(5) Adequate pre-procedural and post-procedural care in accordance with current established veterinary medical and nursing procedures."

Monkey 16212 died as a result of sepsis resulting from prolonged labor and fetal demise. The researcher did not recognize the signs of distress and, therefore, failed to communicate with the veterinarian in order to provide timely care to the animal.

Prior to the time of this inspection, the IACUC reviewed the incident and set up a plan including additional training to ensure such a failure does not recur. Neither the primary nor the co-investigator are involved in animal research at
