

Healing Animals

Trauma related injuries are very common among our wildlife patients. This presentation covers the principles of wound and fracture management in wildlife. Although the body has a tremendous capacity to heal these injuries, veterinary care can improve and speed up the healing process. We discuss a variety of cases and the specific treatment required for successful release.

Hosted by:

South Florida Wildlife Center

located at
3200 SW 4th Avenue
Fort Lauderdale, FL 33315

Presented by:

Dr. Stefan Harsch, DVM

Director of Clinic Operations,
South Florida Wildlife Center
