Type: FOCUSED INSPECTION
Date: 05-OCT-2023

3.131(d)

Sanitation.

During this inspection a large number of black flies were seen in the store front (housing the capybaras and kangaroo), sloth exhibit area, and kitchen. Fly strips were present, but were full and therefore unable to effectively decrease the flies within the facility. The current pest control measures are not sufficient at controlling insect pests. Correct by establishing and maintaining a safe and effective program for the control of insects, ectoparasites, avian and mammalian pests. Correct by October 19, 2023.

This inspection and exit interview were conducted with facility representatives.
